

What is it?

IrriMAX is the complete soil water monitoring software package. It is designed for easy display and interpretation of soil water, salinity, rainfall and irrigation data.

Key features and benefits

- Displays continuous soil water profile data
- Displays individual depth levels or summed profile data
- Directly compares salinity, fertiliser, soil water, irrigation and rainfall data in the same graph window
- Comparison of data from multiple sensors and probes on the one graph
- Powerful zooming functionality to review key events in finer detail or as a broader data overview
- Automated update or graphs upon download
- Graphing features allow the user to set critical soil water thresholds and add management comments to store key notes and information
- Flexible data importing and exporting options
